MD. Examination
Commentary
October 11 , 2016

Time allowed : 2 hours

30 years old primipara, gave birth by C.S. 3 years ago. The C.S. was complicated with puerperal pyrexia which was treated medically. The women nursed her baby for 1 year, and thereafter her menstrual cycle continued to be irregular in the form of oligomenorrhea-amenorrhea . She did not use any contraceptive method; however, she failed to conceive since last delivery.

- a – What are the most probable causes of her infertility ?
- b - What are the required investigations?
- c – What is the plan of treatment ?

Good luck
